

RECURSION & TREES

⇒ A programming & mathematical technique where a function calls itself or indirectly to solve a problem by breaking it down into smaller, similar subproblems.

indices: 0 1 2 3 4 5 6 7
fibonacci sequence: 0, 1, 1, 2, 3, 5, 8, 13, ...

$f(n)$

- if $(n == 0)$: set 0
- if $(n == 1)$: set 1
- return $f(n-1) + f(n-2)$

PROBLEM - 1

78. Subsets

Medium Topics Companies

Given an integer array `nums` of **unique** elements, return *all possible subsets* (the power set).

The solution set **must not** contain duplicate subsets. Return the solution in **any order**.

Example 1:

Input: `nums = [1,2,3]`
Output: `[[], [1], [2], [1,2], [3], [1,3], [2,3], [1,2,3]]`

Example 2:

Input: `nums = [0]`
Output: `[[], [0]]`

Constraints:

- `1 <= nums.length <= 10`
- `-10 <= nums[i] <= 10`
- All the numbers of `nums` are **unique**.

$arr = [1, 2, 3]$

output

`[], [1], [2], [3], [1,2], [1,3], [2,3], [1,2,3]`

pick, not-pick technique

$\begin{matrix} 0 & 1 & 2 \\ [1, 2, 3] \end{matrix}$	
$\begin{matrix} \times & \times & \times \end{matrix}$	} size 0
$\begin{matrix} \checkmark & \times & \times \end{matrix}$	
$\begin{matrix} \times & \checkmark & \times \end{matrix}$	} size 1
$\begin{matrix} \times & \times & \checkmark \end{matrix}$	
$\begin{matrix} \checkmark & \checkmark & \times \end{matrix}$	} subset of size 2
$\begin{matrix} \times & \checkmark & \checkmark \end{matrix}$	
$\begin{matrix} \checkmark & \times & \checkmark \end{matrix}$	
$\begin{matrix} \checkmark & \checkmark & \checkmark \end{matrix}$	} size 3

$\downarrow$
 $\begin{matrix} 0 & 1 & 2 \\ arr = [1, 2, 3] \end{matrix}$
 $n = 3$

`[[1,2,3], [1,2], [1,3], [1], [2,3], [2], [3], []]`

pseudocode:

```

result = []
f(index, sub)
{
    if (index > (n-1))
        result.append(subset)
}
  
```

pick
`sub.append(arr[index])`
`f(index+1, sub)`
`sub.pop()`

not pick
`f(index+1, sub)`

$arr = [1, 2], n = 2$
 $f(index, curr_sub)$
 $result = [] \rightarrow$

$[[], [1], [2], [1, 2]] =$
 $\uparrow \uparrow$

$ans = [[1, 2], [1], [2], []]$

$[1, 2, 3, \dots]$
 $\downarrow \downarrow \downarrow \downarrow$
 $2 \times 2 \times 2 \times \dots$

$T.C = 2^n$
 $S.C = O(n)$

PROBLEM-2

39. Combination Sum

Medium Topics Companies

Given an array of **distinct** integers `candidates` and a target integer `target`, return a list of all **unique combinations** of `candidates` where the chosen numbers sum to `target`. You may return the combinations in any order.

The **same** number may be chosen from `candidates` an **unlimited number of times**. Two combinations are unique if the **frequency** of at least one of the chosen numbers is **different**.

The test cases are generated such that the number of unique combinations that sum up to `target` is less than 150 combinations for the given input.

Example 1:

Input: `candidates = [2,3,6,7], target = 7`

Output: `[[2,2,3],[7]]`

Explanation:

2 and 3 are candidates, and $2 + 2 + 3 = 7$. Note that 2 can be used multiple times. 7 is a candidate, and $7 = 7$.

These are the only two combinations.

Example 2:

Input: `candidates = [2,3,5], target = 8`

Output: `[[2,2,2,2],[2,3,3],[3,5]]`

Example 3:

Input: `candidates = [2], target = 1`

Output: `[]`

$$\text{candidates} = [\overset{0}{2}, \overset{1}{3}, \overset{2}{6}, \overset{3}{7}], \text{target} = 7$$

$$[7] == \text{target}$$

$$\text{sum}([2, 2, 3]) == \text{target}$$

$$[2, 3, 5], \text{target} = 2$$

$$\text{sum}([2, 2, 2, 2]) == \text{target}$$

$$\text{sum}([2, 3, 3]) == \text{target}$$

$$\text{sum}([3, 5]) == \text{target}$$

$f(n, \text{target})$ } generate all subsets from arr of size n with subsets sum as target

$$\overset{0}{2}, \overset{1}{3}, \overset{2}{6}, \overset{3}{7}, t=7$$

$$f(\overset{\text{ind}}{3}, \overset{t}{7}, \text{[]})$$

$$f(3, 0, [7])$$

$$f(2, 7, \text{[]})$$

$$f(1, 1, [6])$$

$$f(1, 7, \text{[]})$$

$$f(1, 4, [3])$$

$$f(1, 1, [3])$$

$$f(0, 4, [3])$$

$$f(0, 2, [3])$$

$$\overset{0}{2}, \overset{1}{3}, \overset{2}{6}, \overset{3}{7}$$

$$\text{result} = [[7], [3, 2, 2]]$$

$$f(0, 0, \begin{bmatrix} 2 \\ 3 \end{bmatrix})$$

✓
X

X

$$f(-1, 0, \begin{bmatrix} 2 \\ 3 \end{bmatrix})$$

pseudocode:

$f(\text{index}, \text{target}, \text{sub})$

{ # base case
if (index < 0)

if (target == 0)

result.append(sub)

if (nums[index] <= target) {
pick & stay

$f(\text{index}, \text{target} - \text{nums}[\text{index}], \text{sub} + [\text{nums}[\text{index}]])$

}

not pick

$f(\text{index} - 1, \text{target}, \text{sub})$

}

$$T.C = \frac{K}{2} \cdot K \approx 2^n$$

$$S.C = K = 5$$

Trees:

DFS & BFS / level order

$$T.C = O(n)$$

$$S.C = O(n)$$

1. Pre-order (root, left, right)

2. In-order (left, root, right)

3. Post-order (left, right, root)

pre-order: [1, 2, 4, 5, 3]

in-order: [4, 2, 5, 1, 3]

post-order: [4, 5, 2, 3, 1]

104. Maximum Depth of Binary Tree

Easy Topics Companies

Given the `root` of a binary tree, return its maximum depth.

A binary tree's **maximum depth** is the number of nodes along the longest path from the root node down to the farthest leaf node.

Example 1:

Input: root = [3,9,20,null,null,15,7]
Output: 3

```

f(root)
{
    if (root == null)
        return 0

    ld = f(root.left)
    rd = f(root.right)

    return 1 + max(ld, rd)
}
  
```

T.C = $O(n)$
S.C = $O(n)$

1448. Count Good Nodes in Binary Tree

Medium Topics Companies Hint

Given a binary tree `root`, a node `X` in the tree is named **good** if in the path from root to `X` there are no nodes with a value greater than `X`.

Return the number of **good** nodes in the binary tree.

Example 1:

Input: `root = [3,1,4,3,null,1,5]`

Output: 4

Explanation: Nodes in blue are **good**.

Root Node (3) is always a good node.

Node 4 -> (3,4) is the maximum value in the path starting from the root.

Node 5 -> (3,4,5) is the maximum value in the path.

Node 3 -> (3,1,3) is the maximum value in the path.

Count = 4

pseudocode:

T.C = $O(n)$

S.C = $O(n)$

$f(\text{root}, \text{max-so-far})$

{ if `root == None`:
return 0

if `root.val >= max-so-far`:

`max-so-far = root.val`

return $1 + f(\text{root.left})$
 $+ f(\text{root.right})$

return $f(\text{root.left})$
 $+ f(\text{root.right})$
